

Dear AMATH:

I teach at Gallia Academy High School in Gallipolis (OH). Several weeks ago, the Curriculum Director told me that Brian was coming to install your Amath program on the computers in one of our computer labs and that I would be teaching two classes there as an experiment to see if we could raise our math proficiency scores.

At first, I was interested but thought it would just be something the students would hate because it put all the responsibility on them to do the work, and that it would fail because they would not perform!

Boy, was I wrong! They've taken to your program like a duck to water! I've got several students in these two classes who failed the course last year but are some of the top achievers on your program thus far!

I also was apprehensive because I thought that I would be worn-out at the end of the day going from student-to-student explaining the mathematics individually...wrong again! Seeing the students work hard has rejuvenated me (and perhaps extended the career of this 29th-year mathematics teacher!).

The second best part (after their learning mathematics) is that at the end of class these general students don't have the "I hate school and mathematics" look on their faces!

When Brian came here last week to show the program to some representatives of the South Point (or somewhere in Lawrence County) School District, basically he would not have had to do anything because I probably sold it for you!

Thank you,

Vincent G. Hill, BS, MEd, MEd
